DETAILED ACTION

Summary

On November 18, 2004, an Office Action was mailed to the Applicant rejecting claims 13-24. On February 14, 2005, the Applicant responded by canceling claims 25-27 and adding new claims 28-34.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 13-24 and 28-34 are rejected under 35 U.S.C. 102(e) as being anticipated by Dulude (6,310,966).

Dulude discloses a method and corresponding program for biometric certificates comprising configuring an automated banking machine, receiving a certificate through operation of the banking machine, authenticating at least one digital signature associated with the certificate through operation of the banking machine, and configuring the banking machine responsive to the certificate and authentication of the at least one digital signature (col.5, line 30 to col.7, line 45); the certificate includes the digital signature, the digital signature is authenticated responsive to a public key of a licensing authority (col.6, line 55 to col.7, line 15); the certificate corresponds to at least

one software component authorized to be installed on the banking machine, and further comprising installing the at least one software component on the banking machine (col.6, lines 18-27); the certificate includes a plurality of sets of configuration rules each set corresponding to at least one of a plurality of automated banking machines, the banking machine is enabled to be configured responsive to at least one set (col.4, lines 1-25); the certificate further includes an expiration parameter, and determining though operation of the banking machine responsive to the expiration parameter that configuration of the software on the machine is not authorized, and preventing configuration of software on the banking machine responsive to the determination (col.2, lines 1-28—discloses that it is well known and practiced); the certificate includes an identification value unique to the banking machine (col.2, lines 1-28); determining through operation of the banking machine that the identification value corresponds to a hardware embedded identification value in the banking machine (col.2, lines 1-28); the certificate includes a terminal identification value, associating the machine with the terminal identification value (col.2, lines 1-28); determining that the terminal identification value has changed, and preventing the machine from performing at least one transaction function responsive to the determination (col.2, lines 1-28); retrieving the certificate from a licensing authority (col.4, lines 55-65); includes receiving the certificate from a server in operative connection with the banking machine (col.5, line 30 to col.7, line 45); computer readable media bearing instructions which are operative to cause a computer in an automated banking machine to carry out receiving a certificate through operation of the banking machine, authenticating at least one digital signature

associated with the certificate through operation of the banking machine, configuring the banking machine responsive to the certificate and authentication of the at least one digital signature (col.5, line 30 to col.7, line 45); configuring a cash dispensing automated teller machine (ATM), receiving at least one digitally signed certificate through operation of the ATM, wherein the ATM includes a cash dispenser and at least one processor, wherein the at least one certificate includes at least one serial number, verifying through operation of the at least one processor that the at least one serial number included in the at least one certificate corresponds to at least one serial number associated with at least one hardware device of the ATM, configuring the ATM through operation of the at least one processor responsive to the at least one digital certificate (col.2, lines 1-28 and col.5, line 30 to col.7, line 45); at least one certificate includes at least one digital signature, authenticating the at least one digital signature through operation of the at least one processor (col.5, line 30 to col.7, line 45); receiving the at least one certificate from a server in operative connection with the ATM through a network (col.5, line 30 to col.7, line 45); at least one hardware device corresponds to at least one of a keypad, a card reader, the cash dispenser, a printer, a depositor, a CPU, and a network device (col.5, line 30 to col.7, line 45); prior to, the ATM is not enabled to perform at least one transaction function involving the operation of the at least one hardware device, in configuring the ATM includes enabling the ATM to perform the at least one transaction function involving the operation of the at least one hardware device (col.5, line 30 to col.7, line 45); the at least one transaction function includes dispensing cash, dispensing cash from the ATM through operation of the cash

dispenser (col.5, line 30 to col.7, line 45); and configuring the ATM responsive to at least one key provided in the at least one certificate (col.5, line 30 to col.7, line 45).

Response to Arguments

Applicant's arguments with respect to claims 13-24 and 28-34 have been considered but are most in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lalita M Hamilton whose telephone number is (571) 272-6743. The examiner can normally be reached on Tuesday-Thursday (8:30-4:30).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vincent Millin can be reached on (571) 272-6747. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
